ИНСТИТУТ ИНТЕЛЛЕКТУАЛЬНЫХ КИБЕРНЕТИЧЕСКИХ СИСТЕМ

Кафедра
«Криптология и кибербезопасность»

Лабораторная работа №8

по предмету «Технологии контейнеризации»

Выполнил студент группы Б20-505

Сорочан Илья

Москва – 2023

Содержание

1. Выбор образа

Выбрал kassany/ziglang

Тэг master

```
vagrant@delta:~$ sudo docker pull kassany/ziglang
Using default tag: latest
latest: Pulling from kassany/ziglang
ff6c6006db95: Pull complete
ed62fc66e749: Pull complete
Digest: sha256:232a2fdcc53efbd78218928e63bc9748f03b588459b2ee3186cd04a2e119fcbc
Status: Downloaded newer image for kassany/ziglang:latest
docker.io/kassany/ziglang:latest
```

Рис. 1. Скачивание образа

```
vagrant@delta:~$ sudo docker run --rm -v $(pwd):/app -w /app kassany/ziglang
info: Usage: zig [command] [options]

Commands:

  build            Build project from build.zig
  fetch            Copy a package into global cache and print its hash
  init-exe         Initialize a `zig build` application in the cwd
  init-lib         Initialize a `zig build` library in the cwd

  ast-check        Look for simple compile errors in any set of files
  build-exe        Create executable from source or object files
  build-lib        Create library from source or object files
  build-obj        Create object from source or object files
  fmt              Reformat Zig source into canonical form
  run              Create executable and run immediately
  test             Create and run a test build
  translate-c      Convert C code to Zig code

  ar               Use Zig as a drop-in archiver
  cc               Use Zig as a drop-in C compiler
  c++              Use Zig as a drop-in C++ compiler
  dlltool          Use Zig as a drop-in dlltool.exe
  lib              Use Zig as a drop-in lib.exe
  ranlib           Use Zig as a drop-in ranlib
  objcopy          Use Zig as a drop-in objcopy
  rc               Use Zig as a drop-in rc.exe

  env              Print lib path, std path, cache directory, and version
  help             Print this help and exit
  libc             Display native libc paths file or validate one
  targets          List available compilation targets
  version          Print version number and exit
  zen              Print Zen of Zig and exit

General Options:

  -h, --help       Print command-specific usage

error: expected command argument
```

Рис. 2. Запуск образа

2. Сканирование

2.1. Docker Scout

```
curl -fsSL https://raw.githubusercontent.com/docker/scout-cli/main/install.sh | sh
```

```
vagrant@delta:~$ docker scout
docker: 'scout' is not a docker command.
See 'docker --help'
vagrant@delta:~$ curl -fsSL https://raw.githubusercontent.com/docker/scout-cli/main/install.sh | sh
[info] fetching release script for tag='v1.0.9'
[info] using release tag='v1.0.9' version='1.0.9' os='linux' arch='amd64'
[info] installed /home/vagrant/.docker/cli-plugins/docker-scout
vagrant@delta:~$ docker scout --help

 Command line tool for Docker Scout

Usage
  docker scout [command]

Available Commands
  cache           Manage Docker Scout cache and temporary files
  compare         Compare two images and display differences (experimental)
  config          Manage Docker Scout configuration
  cves            Display CVEs identified in a software artifact
  enroll          Enroll an organization with Docker Scout
  environment     Manage environments (experimental)
  help            Display information about the available commands
  integration     Commands to list, configure, and delete Docker Scout integrations
  policy          Evaluate policies against an image and display the policy evaluation results (experimental)
  quickview       Quick overview of an image
  recommendations Display available base image updates and remediation recommendations
  repo            Commands to list, enable, and disable Docker Scout on repositories
  version         Show Docker Scout version information

Use "docker scout [command] --help" for more information about a command.

Learn More
  Read docker scout cli reference at https://docs.docker.com/engine/reference/commandline/scout/

Report Issues
  Raise bugs and feature requests at https://github.com/docker/scout-cli/issues
```

Рис. 3. Установка Docker Scout

```
vagrant@delta:~$ docker scout quickview kassane/ziglang
Log in with your Docker ID or email address to use docker scout.

If you don't have a Docker ID, head over to https://hub.docker.com to
create one. You can log in with your password or a Personal Access Token (PAT)
by running docker login.
Using a limited-scope PAT grants better security and is required for organizations
using SSO. Learn more at https://docs.docker.com/go/access-tokens/

You can also log in using Docker Desktop.
```

Рис. 4. Docker Scout Quickview

```
vagrant@delta:~$ docker image ls
REPOSITORY        TAG       IMAGE ID       CREATED      SIZE
kassany/ziglang   latest    784730331869   2 days ago   285MB
vagrant@delta:~$ docker tag kassany/ziglang:latest k0tran/ziglang:latest
vagrant@delta:~$ docker image ls
REPOSITORY        TAG       IMAGE ID       CREATED      SIZE
k0tran/ziglang    latest    784730331869   2 days ago   285MB
kassany/ziglang   latest    784730331869   2 days ago   285MB
```

Рис. 5. Ретегаем

```
vagrant@delta:/vagrant$ docker login -u k0tran
Password:
WARNING! Your password will be stored unencrypted in /home/vagrant/.docker/config.json.

```

Рис. 19. Запуск анализа

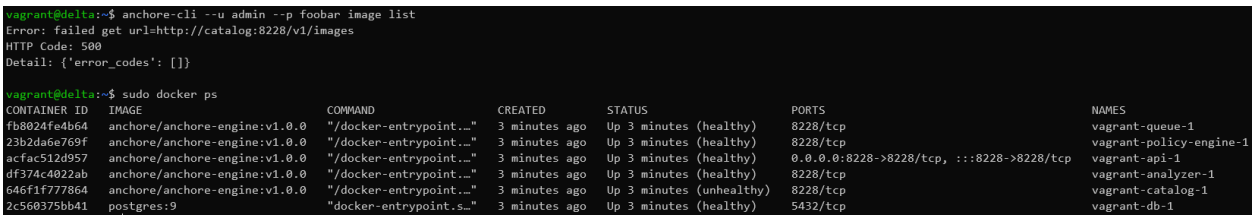

Рис. 20. Анализ зафейлен x2

2.5. Docker Bench for Security

Так как Docker Bench Security необходимо запускать изнутри контейнера, а в выбранный образ не только не интерактивный (zig запускается один раз), но и отстуствует шелл впринципе (`busybox (x86_64)`) Пробовал:

- `/bin/bash`
- `/bin/sh`
- `sh`
- `/bin/ash`

Поэтому возмем образ от того же автора для той же цели, но на основе дебиана `kassany/bookworm-ziglang`

```
docker run --rm -it -v $(pwd):/app -w /app kassany/bookworm-
ziglang:latest bash
apt update
apt install git
```

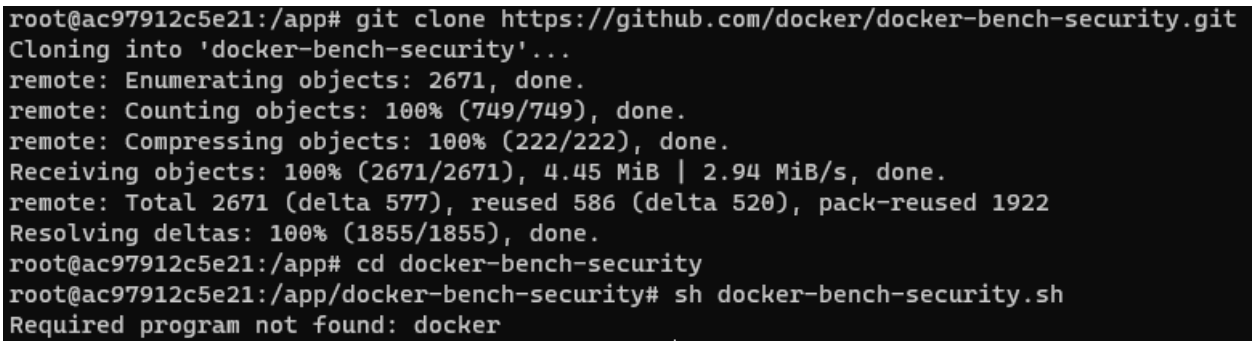

Рис. 21. Первый запуск

Ставим docker engine

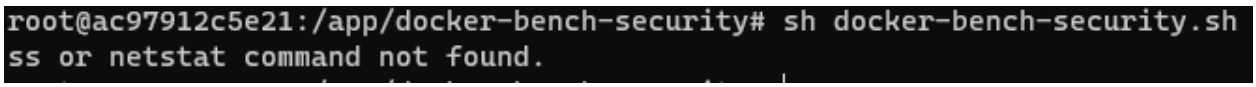

Рис. 22. Первый запуск

Отсюда я предполагаю что скрипт должен быть запущен на хостовой машине (либо используя контейнер docker-bench-security)

```
git clone https://github.com/docker/docker-bench-security.git
cd docker-bench-security
sudo sh docker-bench-security.sh
```

```
# ------------------------------------------------------------------------
# Docker Bench for Security v1.6.0
#
# Docker, Inc. (c) 2015-2023
#
# Checks for dozens of common best-practices around deploying Docker
containers in production.
# Based on the CIS Docker Benchmark 1.6.0.
# ------------------------------------------------------------------------

[PASS] 4.9 - Ensure that COPY is used instead of ADD in Dockerfiles
(Manual)
[NOTE] 4.10 - Ensure secrets are not stored in Dockerfiles (Manual)
[NOTE] 4.11 - Ensure only verified packages are installed (Manual)
[NOTE] 4.12 - Ensure all signed artifacts are validated (Manual)

[INFO] 5 - Container Runtime
[INFO]   * No containers running, skipping Section 5

[INFO] 6 - Docker Security Operations
[INFO] 6.1 - Ensure that image sprawl is avoided (Manual)
[INFO]      * There are currently: 5 images
```

```
[INFO]      * Only 0 out of 5 are in use
[INFO] 6.2 - Ensure that container sprawl is avoided (Manual)
[INFO]      * There are currently a total of 0 containers, with 0 of
them currently running

[INFO] 7 - Docker Swarm Configuration
[PASS] 7.1 - Ensure swarm mode is not Enabled, if not needed
(Automated)
[PASS] 7.2 - Ensure that the minimum number of manager nodes have
been created in a swarm (Automated) (Swarm mode not enabled)
[PASS] 7.3 - Ensure that swarm services are bound to a specific host
interface (Automated) (Swarm mode not enabled)
[PASS] 7.4 - Ensure that all Docker swarm overlay networks are
encrypted (Automated)
[PASS] 7.5 - Ensure that Docker's secret management commands are used
for managing secrets in a swarm cluster (Manual) (Swarm mode not
enabled)
[PASS] 7.6 - Ensure that swarm manager is run in auto-lock mode
(Automated) (Swarm mode not enabled)
[PASS] 7.7 - Ensure that the swarm manager auto-lock key is rotated
periodically (Manual) (Swarm mode not enabled)
[PASS] 7.8 - Ensure that node certificates are rotated as appropriate
(Manual) (Swarm mode not enabled)
[PASS] 7.9 - Ensure that CA certificates are rotated as appropriate
(Manual) (Swarm mode not enabled)
[PASS] 7.10 - Ensure that management plane traffic is separated from
data plane traffic (Manual) (Swarm mode not enabled)

Section C - Score

[INFO] Checks: 86
[INFO] Score: -2
```

```
sudo sh docker-bench-security.sh -c container_images
```

```

Section A - Check results

[INFO] 4 - Container Images and Build File
[INFO] 4.1 - Ensure that a user for the container has been created
(Automated)
[INFO]      * No containers running
[NOTE] 4.2 - Ensure that containers use only trusted base images
(Manual)
[NOTE] 4.3 - Ensure that unnecessary packages are not installed in
the container (Manual)
[NOTE] 4.4 - Ensure images are scanned and rebuilt to include security
patches (Manual)
[WARN] 4.5 - Ensure Content trust for Docker is Enabled (Automated)
[WARN] 4.6 - Ensure that HEALTHCHECK instructions have been added to
container images (Automated)
[WARN]      * No Healthcheck found: [k0tran/ziglang:latest kassany/
ziglang:latest]
[WARN]      * No Healthcheck found: [k0tran/ziglang:latest kassany/
ziglang:latest]
[WARN]     * No Healthcheck found: [kassany/bookworm-ziglang:latest]
[WARN]      * No Healthcheck found: [aquasec/trivy:latest]
[WARN]      * No Healthcheck found: [postgres:9]
[INFO] 4.7 - Ensure update instructions are not used alone in the
```

```
Dockerfile (Manual)
[INFO]           *  Update  instruction  found:  [kassany/bookworm-
ziglang:latest]
[INFO]      * Update instruction found: [postgres:9]
[NOTE] 4.8 - Ensure setuid and setgid permissions are removed (Manual)
[PASS] 4.9 - Ensure that COPY is used instead of ADD in Dockerfiles
(Manual)
[NOTE] 4.10 - Ensure secrets are not stored in Dockerfiles (Manual)
[NOTE] 4.11 - Ensure only verified packages are installed (Manual)
[NOTE] 4.12 - Ensure all signed artifacts are validated (Manual)
